

End of Trip Facility Aurora Place Sydney NSW

Aurora Place

bokor architecture + interiors has created a premier end of trip facility at Sydney's iconic Renzo Piano designed Aurora Place.

The facility caters for and encourages the building's users to ride/walk/run to work, with capacity for 200 bikes. Aurora Place holds a 4 star NABERS Energy Base Building rating and the client was committed to continued ESD and sustainability in all areas. All finishes, materials and fixtures were specified to address sustainability and durability concerns.

A key design element was linking way finding to functionality. Graphics and way finding signage were carefully incorporated to ensure users were able to move around and use the space instinctively.

Bokor maintained commitment to the project from concept stage through to completion, working as part of a complex team including building management, building marketing and branding, security, user groups, project manager, builders and contractors. With clearly delivered concepts and good communication, the team together delivered a successful project.
